Together, we care for Water

We are committed to continuing making responsible water stewardship a priority at our Princes Gate site, sustainably managing our water resources to protect them for future generations.

Our efforts will extend beyond our own operation. We will **actively engage with partners and stakeholders in an open and transparent way**, promoting a collaborative approach to water stewardship within the wider catchment. We will develop collective action plans for the benefit of shared water resources and respective water catchment areas, **ensuring alignment to and in support of existing catchment sustainability plans**.

We will take the necessary steps within our authority to ensure that the Princes Gate site **allocates resources to implement the Alliance Water Stewardship (AWS) Standard** and achieve the following five outcomes:

- Good water governance
- Sustainable water balance
- Good water quality status
- Safe water sanitation and hygiene for all (WASH)
- Important water-related areas

We will ensure the site complies with all relevant legal and regulatory requirements. We will also ensure our employees on-site and the local community have adequate access to safe water for drinking, sanitation and hygiene (WASH).

Finally, we commit to reviewing and modifying not only our own site's water stewardship opportunities, but also, where relevant to advance good water governance in the local area and catchment. We will also **implement and disclose with our stakeholder's progress on water stewardship program(s) to achieve improvements in AWS water stewardship outcomes**.
